SECTION 01

WHAT UNDERGROUND IS

The operating system for EDM culture.

Not a track ID app. Not a ticketing platform. Not a social network. The OS — where every part of the scene lives in one place, and everything else becomes a feature.

Community first. Software second. Culture always.

TWO WAYS IN — ONE DESTINATION

People join Underground for one of two reasons. Both lead to the same place.

ENTRY POINT A — THE WEDGE

TRACK IDs + EVENTS

"What track was that?" and "What's happening tonight?" are the two questions EDM fans ask every single week. Underground

answers both better than anything else.

Market as: "The best place to discover IDs, track what DJs are playing, and find EDM events."

ENTRY POINT B — THE SCENE

SOCIAL + CULTURE

For fans who already know they want a social network built for the scene. Post set reviews, festival clips, hot takes, rankings, predictions. Follow DJs. Build status.

Market as: "Instagram for EDM. Built by the scene, for the scene."

Both entry points lead to the same experience: a feed, a community, and an identity in the scene. The wedge users discover the social layer. The social users discover the track ID and radar tools. Over time there is no difference.

THE DAILY HABIT LOOP

Apps that people open because of a specific reason become habits. Underground gives users five reasons to open every day:

HEAT

Heat Score changed on a track you follow

ID

Someone solved your track ID request

PLAY

A DJ you follow played a track last night

DROP

Track you've been tracking finally released

EVENT

New event announced near you

STATUS

You moved up the city leaderboard

If people only open the app when they need tickets, you'll struggle. If they open it every day, that's where growth happens.

The habit loop is not a feature — it is the product strategy.

WHAT UNDERGROUND REPLACES

Instagram, TikTok, SoundCloud, Eventbrite, Beatport, Resident Advisor, Bandsintown, 1001Tracklists, Discord — fans use all of these badly because none of them were built for EDM culture. Underground is.

OPEN THE APP AND SEE:

- Chris Stussy just announced he's playing Miami Friday
- New track from a producer you follow
- A warehouse rave tonight 2 miles from you
- Someone just solved your track ID from Berghain last night
- Ultra Miami lineup just dropped
- Venue posted the aftermovie from last weekend
- Your scene status just leveled up to Curator
- **Unreleased ID you've been tracking just hit Heat Score 97**

Property	Value
Domain	ugscene.app
Positioning	"The operating system for EDM culture."
External tagline	"Everything electronic in one place."
Wedge tagline	"The best place to discover IDs, track what DJs are playing, and find events."
Primary audience	Electronic music fans, DJs, producers, venues, promoters
Launch city	Miami — University of Miami campus + local scene
Version	4.0 — The Complete Outline

SECTION 02

APP MOCKUPS

All 5 screens from the approved design mockup. These are the reference designs — build exactly to this spec.

SCREEN 1 — SOCIAL FEED (MAIN HOME SCREEN)

City navigation pills, role-badged posts, mixed post types (text/video/event/audio), yellow CTAs, bottom tab nav: FEED / TONIGHT / TV / RADAR / YOU

SCREEN 2 – TONIGHT NEAR ME

Dark Mapbox map with glowing venue dots, genre filter pills, event cards showing heat score badge, distance, sold% and ticket price, sorted by proximity.

SCREEN 3 – UNDERGROUND TV

Full-screen vertical video (TikTok-style), Following/For You/Live tabs, track detection overlay at bottom, ID AVAILABLE + ADD TO CRATE action buttons.

SCREEN 4 – EVENT DETAIL (KLUBNACHT AT BERGHAIN)

Full event detail with lineup cards showing time slots and room assignments (HEADLINER/SUPPORT/PANORAMA BAR), large yellow BUY CTA, FOLLOW buttons per artist.

SCREEN 5 – USER PROFILE (CRATE DIGGER LVL 7)

Gradient blob header, IDS SOLVED stat, XP progress bar (CRATE DIGGER → VINYL HUNTER), POSTS/CRATES/IDS/EVENTS tabs, crate cards with gradient artwork.

DESIGN VERDICT

This mockup is completely realistic and buildable. The design language is consistent across all 5 screens — same badge system, same font hierarchy, same yellow accent, same bottom nav. The gradient blob artwork as event placeholders is pure CSS. The Tonight Near Me card (heat score + distance + sold% + price in one card) is the best UX decision in the mockup.

BUILD IT EXACTLY LIKE THIS.

SECTION 03

THE FIVE PILLARS

Everything in Underground is built around five core pillars. All features feed into at least one of them.

PILLAR 01 · TAB: FEED

THE SOCIAL SCENE

The feed, profiles, follows, and community layer. Posts. Comments. Reposts. This comes first. This is the reason people open

the app every day.

PILLAR 02 · THE MOAT

SETLIST INTELLIGENCE

The flagship feature. Upload any DJ set. Get a complete timestamped tracklist automatically. Released tracks. Unreleased tracks. White labels. Everything identified. No other platform does this.

PILLAR 03 · TAB: RADAR

UNDERGROUND RADAR

The track discovery and trending engine. Tracks gaining momentum before they go mainstream. All ranked by proprietary Heat Score. What the whole scene is buzzing about before it's mainstream.

PILLAR 04 · TAB: TV

UNDERGROUND TV

TikTok/Reels-style vertical video feed built exclusively for electronic music. Every video auto-analyzed for track recognition.

PILLAR 05 · TAB: TONIGHT

TONIGHT NEAR ME

What is happening tonight, near you, right now. Events, shows, afterparties, secret raves, last-minute tickets. The reason people open the app on a Friday night. Unlike Eventbrite or RA, it's personalized to your city, your genre preferences, and your friends' activity.

SECTION 04

SIX USER ROLES

Role selection happens at signup and personalizes the entire experience from second one.

FAN / LISTENER

- Follow DJs, producers, venues, labels
- Discover events and buy tickets
- ID tracks from sets and clubs
- Follow city scenes
- Build playlists and crates
- Earn reputation by solving IDs
- Get notified when unreleased tracks drop
- Find what's happening tonight near them

DJ

- Post upcoming shows and sets
- Upload mixes for Setlist Intelligence

- Build a following that actually sees posts (no suppression)
- Receive booking inquiries through the app
- Share unreleased track teasers
- Access analytics on fans and reach
- Get verified badge and priority placement

PRODUCER

- Share previews of unreleased music
- Announce releases and upcoming drops
- Receive structured feedback from fans, DJs, labels
- Track which DJs are playing their music
- Track release performance
- Grow an audience before a label deal

VENUE

- Post events with full lineups
- Sell tickets directly through the platform
- Build a venue follower base
- Upload aftermovies and event content
- Promote upcoming shows in city feeds

PROMOTER

- Create and manage events
- Sell tickets with Stripe Connect
- Find and book DJs through the marketplace
- Target city-specific audiences
- Track ticket velocity and sellout pace

LABEL

- Maintain a label profile with artist roster
- Manage release calendars
- Promote new drops to followers
- Scout emerging talent via Radar and Heat Score
- Access trend reports for A&R intelligence

DM Mono	Labels, tags, badges, code, metadata	Google Fonts
DM Sans	Body text, captions, descriptions	Google Fonts

DESIGN PRINCIPLES

- 01

Mobile first. Every screen designed for a phone before a desktop.
- 02

The feed is the home screen. Everything branches from it.
- 03

One tap to anything. Events, tracks, profiles — never buried.
- 04

Speed over features. A fast empty feed beats a slow full one.
- 05

Dark aesthetic throughout. This is a club, not a tech startup.

SECTION 06

TECH STACK

Layer	Technology	Why
Mobile App	React Native + Expo	Cross-platform iOS + Android, Expo EAS for builds, Expo Notifications for push
Web App	Next.js 14 App Router	SSR for SEO (track pages need to be crawlable), API routes built-in, server components
Language	TypeScript strict	Entire codebase, no any types allowed
Styling	Tailwind CSS + CSS variables	Consistent design tokens, dark mode by default
Database	Supabase (PostgreSQL)	RLS built-in (critical), real-time subscriptions for feed, auth + storage included
Auth	Supabase Auth + Google OAuth	Zero-config, works with RLS, role metadata in JWT
Storage	Supabase Storage	Audio, video, images — same platform as DB
Push Notifications	Expo Notifications	APNs (Apple) + FCM (Android) in one SDK
Payments	Stripe + Stripe Connect	Connect = venues get paid directly, Underground never holds funds, legally correct from day 1
Audio ID Primary	Audd.io	Best for DJ/social content, strong with electronic music
Audio ID	ACRCloud	Bulk endpoint for Setlist Intelligence (60s segments, batch)

Secondary

Audio ID Fallback	AcoustID	Free, community-submitted, open source
Music APIs	Spotify + Beatport RSS + SoundCloud oEmbed	Track metadata, streaming links, new releases feed
Email	Resend	Best deliverability, React email templates
Rate Limiting	Upstash Redis	Serverless-compatible, sliding window algorithm
Error Tracking	Sentry	Client + server, source maps
Web Hosting	Vercel	Next.js native, edge functions, fast CI/CD
Mobile Builds	Expo EAS	Required for APNs (Apple push notifications)
Maps	Mapbox	Better dark theme, better custom markers, lower cost at scale than Google Maps
State Management	TanStack Query	Infinite scroll, optimistic updates, cache invalidation
Validation	Zod	Runtime validation matches TypeScript types, every API route
Animation	Framer Motion	Feed transitions, waveform animation, TV scroll

NPM INSTALL COMMAND

```
npm install @supabase/supabase-js @supabase/ssr stripe @stripe/stripe-js \
  @upstash/redis @upstash/ratelimit resend zod @sentry/nextjs \
  lucide-react framer-motion mapbox-gl react-map-gl \
  @tanstack/react-query date-fns
```

SECTION 07

DATABASE SCHEMA — 22 TABLES

All tables use Supabase (PostgreSQL). RLS policies required on every table.

CORE TABLES

```
users
  id, email, username, display_name, avatar_url, bio, city
  role (fan/dj/producer/venue/promoter/label/admin)
  verified, follower_count, following_count
  stripe_customer_id, stripe_account_id
  location_lat, location_lng -- for Tonight Near Me
```

```

profiles
  id, user_id → users, role_type, genres[], city
  bio_extended, social_links (jsonb), booking_email
  fee_range, available_dates (jsonb), verified, pro_subscriber

events
  id, organizer_id → users, name, venue_name, city, country
  event_date, start_time, end_time, description, flyer_url
  lineup[], genres[], ticket_price, ticket_capacity, tickets_sold
  lat, lng -- for Tonight Near Me map
  is_secret, requires_rsvp, is_afterparty
  ticket_url_external, is_free
  status (draft/published/cancelled/past)

tickets
  id, event_id → events, user_id → users
  stripe_payment_intent_id, stripe_transfer_id
  price_paid, platform_fee
  status (pending/confirmed/refunded/cancelled)
  qr_code

releases
  id, title, artist_name, label_id → users (nullable)
  artwork_url, release_date
  release_type (single/ep/album/compilation/white_label/bootleg/edit)
  genres[], bpm_range, key_signature
  beatport_url, spotify_url, soundcloud_url, apple_music_url, bandcamp_url
  hype_count, heat_score
  is_released (bool – true=released, false=unreleased)

```

SOCIAL TABLES

```

posts
  id, user_id → users
  type (text/clip/set/release_share/event_share/teaser/video)
  content, media_url, video_url
  event_id → events (nullable), release_id → releases (nullable)
  genre_tags[], city
  like_count, comment_count, repost_count, is_promoted

comments
  id, post_id → posts, user_id → users
  parent_id (nullable – threading)
  content, like_count

follows
  id, follower_id → users, following_id
  following_type (user/scene/genre/track/crate)
  UNIQUE (follower_id, following_id, following_type)

notifications
  id, user_id → users, type
  title, body, link, read

```

AUDIO ID TABLES

```

id_requests
  id, user_id → users, clip_url, clip_duration
  status (unsolved/solved/partial)

```

```
solved_track_name, solved_artist, solved_label  
upvote_count
```

SECTION 08

ALL PAGES & ROUTES — 26 TOTAL

Route	Page	Key Elements
/	Landing	Animated waveform hero, live ticker, 6-role value props, featured events, new releases, city scenes, Radar preview
/feed	Social Feed	For You / Following / Releases / Events / Sets / TV tabs. Compose modal. City toggle. Right sidebar: Radar widget, Tonight Near Me
/tv	Underground TV	TikTok-style vertical video. Following / For You / Live tabs. Auto track recognition on every video
/tonight	Tonight Near Me	Geolocation-based. Map view + list view. Genre/distance/price filters. Last-minute tickets. Friends attending
/discover	People Directory	DJs / Producers / Venues / Labels / Promoters. Search + genre + city filters. Follow buttons. Verified badges
/[username]	Profile	Role-specific: DJs (shows/sets/booking), Producers (teasers/releases), Venues (events/aftermovies), Fans (crates/IDs/rep)
/events	Events & Ticketing	Filter by city, genre, date, distance. Sold out indicators. Almost sold out badge at 85%+
/events/[id]	Event Detail	Full lineup with artist links, ticket flow, friends attending list, setlists after the event
/releases	Releases	Released AND unreleased. This Week / Upcoming / Last Week / All Time. Hype voting.

Platform links

/radar	Underground Radar	Heat Score rankings. Genre / city / timeframe / status filters. Notify Me on every entry
/setlist	Setlist Intelligence	Upload DJ set up to 3 hours. Processing animation. Timestamped tracklist. Export to Spotify/Apple Music/Beatport
/scenes	City Scenes	Grid of all cities with member count and event count
/scenes/[city]	City Scene	City-filtered feed, local artists, local venues, upcoming events, city rankings, local releases
/rankings	City Rankings	Weekly leaderboard by Heat Score activity, ID requests, new events, post volume. Week-over-week changes
/festivals	Festivals	Ultra Miami, Tomorrowland, EDC, Movement Detroit, ADE, Creamfields, Dekmantel, Awakenings...
/festivals/[slug]	Festival Detail	5 tabs: Lineup / Setlists / Track IDs / Aftermovies / Tickets. Community-built setlists
/tracks/[id]	Track Page	Every track (released+unreleased) gets its own page. BPM, key, Heat Score, Where Was This Played, Track Lineage
/crates	DJ Crates	Public/private genre-tagged track collections. Follow curators like DJs
/booking	Booking Marketplace	Browse DJs by fee range, dates, cities played, audience size. Direct inquiry form
/reputation	Fan Reputation	XP levels, city leaderboard, earn actions, progress bar. ID Hunter → Crate Digger → Underground Expert → Scene Legend
/identify	Audio ID Tool	Upload / record / paste URL. Works for released AND unreleased tracks
/identify/unsolved	Community IDs	All unsolved track requests. Vote on suggestions. Sort by newest / most votes / genre
/lineage	Track Lineage	Full version tree: Original → Bootleg → Edit → VIP Mix → Festival Edit → Official Release
/compatibility	Mix Compatibility Engine	BPM + Camelot Wheel key matching. Perfect mix candidates sorted by harmonic score
/pricing	Pricing	All tiers with feature comparison, Stripe Checkout
/dashboard	Creator Dashboard	Follower growth, post reach, ticket sales, booking inquiry volume, release performance, city demand, promotion management

SECTION 09

CORE FEATURE DETAILS

FAN UGC — WHAT FANS POST EVERY DAY

Too much content on most platforms comes from DJs, venues, and promoters. Those are important but they

won't create enough volume. Fans need clear reasons and formats to post every day. The more fans post, the harder Underground is to copy.

Track IDs

Upload 30-sec clip from a set. Ask the community. Most-played content type on the platform.

Set Reviews

Text or video review of a DJ set they attended. Rating, standout tracks, energy breakdown.

Festival Clips

Short video from an event. Auto-tagged to venue + event. Track recognition overlay fires automatically.

Event Photos

Photo post linked to an event. Builds the visual archive of every venue and festival.

DJ Rankings

"My top 5 DJs playing Miami right now." These posts generate comments, debate, and follows.

Hot Takes

"This track is going to be massive." "This DJ peaked in 2022." Controversial = high engagement.

Predictions

"Predict the closing track for Ultra main stage." Creates community games before events.

Fan Setlists

Manually build the setlist from a show they attended. Community verifies and upvotes correct tracks.

Scene Reports

"What's happening in Miami this month." City scene context that no algorithm can generate.

EDM PASSPORT

Every event a user attends gets logged. Every DJ they see. Every venue they visit. This becomes a visual identity — proof of who you are in the scene.

Example: Will's Passport

EVENTS ATTENDED

→ Ultra Miami 2025

- Club Space — 3 visits
- III Points 2024
- Factory Town — 6 visits
- DJS SEEN LIVE
- Chris Stussy
- KETTAMA
- Mau P
- Innellea

Fans love tracking this. It becomes a shareable identity card. "Send your passport" becomes a thing in the community.

HOW PASSPORT STAMPS ARE EARNED

- Check in at an event via the app (geolocation or QR scan)
- Upload a clip from the event (auto-tags the venue)
- Post a set review tagged to a DJ and event
- RSVP + mark as attended after the event

ANNUAL UNDERGROUND LISTS

Published once a year. Sounds simple. Creates enormous engagement. People argue about rankings endlessly — that drives weekly active users all December.

Top 100 IDs

Most-hunted unreleased tracks

Top 100 DJs

Underground's own DJ ranking — not DJ Mag

Rising Producers

Artists who broke through this year

Top Venues

Voted by fans who attended

Top Cities

Most active scenes worldwide

Track of the Year

Community vote + Heat Score data

These lists are a PR event. Music press covers them. DJs share when they're on them. Artists campaign for votes. It's free distribution every December.

THE EDM GRAPH — YOUR DATA MOAT

Every interaction on Underground builds a graph that no competitor can buy or copy. This is the long-term moat.

→ User → Track

Which fans follow which tracks. Who identified what. Who saved what before it blew up.

→ User → DJ

Which fans follow which DJs. Who discovered a DJ early. Who attends their shows regularly.

→ DJ → Track

Which DJs are playing which tracks. Who breaks tracks first. Which DJs have overlapping audiences.

→ City → Trend

Which tracks are blowing up in which cities before going global. Predictive signals for labels.

→ Time → Prediction

At scale: which tracks with Heat Score 60 today will hit 90 in 3 weeks. Underground becomes a predictive intelligence layer.

Eventually you know: what every user likes, which DJs overlap in audience, which cities are growing, which tracks are exploding. This data becomes extremely valuable to labels, booking agencies, and festival promoters — and it only exists on Underground.

DISCOVERY — BETTER THAN TIKTOK FOR EDM

EDM discovery today is fragmented. Fans bounce between Instagram, TikTok, SoundCloud, Spotify, and Resident Advisor trying to piece together what's happening. Underground consolidates it.

Open Underground and instantly see:

→ Trending IDs this week in your city

→ Local events tonight sorted by distance

→ New posts from DJs you follow

→ New releases + Heat Score changes

→ Tracks your followed DJs played this week — before anyone else knows

SECTION 10

AUDIO ID & SETLIST PIPELINES

AUDIO ID PIPELINE

Three-tier fallback. Used for single clip identification (/identify page and TV track recognition).

```
Upload (clip or URL)
  → Validate: MIME type (MP3/WAV/M4A/MP4/MOV), max 60s, max 50MB (Zod)
  → Store in Supabase Storage
  → Send to Audd.io
```

```
Match found + confidence ≥ 80%?
YES → Enrich: Spotify by ISRC, YouTube, Beatport
    → Return identified result with all links
    → Show Heat Score, Where Was This Played, Track Lineage
```

```
NO → Try ACRCLOUD
    → Match found?
      YES → Same enrichment
      NO → Try AcoustID
          → Still nothing?
            → Create id_requests row
            → Show community ID UI
            → Optional: post to feed as UNID clip
            → Notify user when community solves it
```

SETLIST INTELLIGENCE PIPELINE

The biggest competitive moat. No other platform does this. Input: any DJ set (MP3, WAV, FLAC, M4A, SoundCloud URL, Mixcloud URL, up to 3 hours).

```
Upload (file or SoundCloud/Mixcloud URL, up to 3 hours)
  → Validate: audio/video MIME, max 3hr, max 2GB
  → Upload to Supabase Storage
  → Create setlist_uploads row (status: processing)
  → Split audio into 60-second segments
  → Batch send to ACRCLOUD bulk fingerprinting endpoint
  → For each segment:

      IDENTIFIED (confidence ≥ 80%):
        → Save to setlist_tracks with timestamp_seconds
        → Link to releases row (or create if new)
        → Increment track_plays for this DJ + set
        → Queue for Heat Score recompute

      UNIDENTIFIED:
        → Create id_requests row
        → Save to setlist_tracks (status: unreleased/unknown)
        → Flag for Radar if multiple DJs have played it

  → Update setlist_uploads (status: done, counts)
  → Trigger Heat Score nightly recompute via Supabase Edge Function
  → Return timestamped setlist to user
  → Offer playlist exports (Spotify / Apple Music / Beatport / shareable link)
```

OUTPUT EXAMPLE:

Timestamp	Track	Artist	Status
00:00	Unreleased ID	Unknown	

			HEAT: 97	NOTIFY ME
04:17	XXX (Original Mix)	Chris Stussy	RELEASED	SPOTIFY
08:44	Unknown PAWSA ID	PAWSA	HEAT: 89	NOTIFY ME
12:05	Fly Away XTC	KETTAMA	RELEASED	BEATPORT
16:22	White Label Edit	Unknown	HEAT: 78	NOTIFY ME

TICKETING FLOW — STRIPE CONNECT

Venue creates event → sets ticket price and capacity

User clicks Buy Ticket (from feed, Tonight Near Me, event page, anywhere)

- Create Stripe Checkout session
- User completes payment
- Stripe webhook: checkout.session.completed
- Stripe Connect transfers to venue minus 2.5% fee
- Create tickets row (status: confirmed)
- Generate QR code stored in mobile ticket wallet
- Confirmation email via Resend with QR attached
- In-app notification to buyer
- Mobile ticket viewable offline

WHY STRIPE CONNECT: venues receive money directly.

Underground NEVER holds funds. KYC and payouts handled automatically.

This is legally correct from day one.

SECTION 11

HEAT SCORE FORMULA

Proprietary 0–100 score. Computed nightly via Supabase Edge Function. This is what makes Underground Radar unique.

40% ID Requests
Last 7 days

25% DJ Plays
Via Setlist Intelligence

15% Saves & Playlist Additions
Any user action

10% City Activity
Unique cities where heard

7%

Reposts & Shares

Social amplification

8%

Festival Appearances

Major event plays

→ Score decays over time without activity

→ Score resets to 0 when a track becomes truly mainstream (Beatport Top 10 or Spotify editorial)

→ Animated ring appears in UI at Heat Score 90+

→ A track on Bandcamp being played at Berghain will rank high even if not on Spotify yet

SECTION 12

SCENE STATUS & REPUTATION SYSTEM

Reddit has karma. Discord has roles. GitHub has contributions. Underground has Scene Status — the proof of who you are in electronic music. People love status. Status creates retention. Status creates identity. Identity creates evangelists.

SIX LEVELS OF SCENE STATUS

LEVEL 1

Local

0–200 XP

New to the scene. Just showed up.

LEVEL 2

Regular

200–1K XP

Posts, attends events, engages.

LEVEL 3

Resident

1K–5K XP

Solves IDs, builds crates, known locally.

LEVEL 4

Curator

5K–15K XP

People follow your crates. Known for taste.

LEVEL 5

Tastemaker

15K–50K XP

Discovers tracks before they blow up. Cited in the scene.

LEVEL 6 — RARE

Scene Legend

50K+ XP

Irreplaceable. The community knows who you are.

EARNING XP — EVERY ACTION COUNTS

TRACK ID & DISCOVERY

Submit an answer to a community ID

+50

Your ID confirmed correct by upvotes

+100

First person to correctly ID a track

+200

ID confirmed by the artist themselves

+500

You followed a track before Heat Score 50 — it hits 90+

+300

Track you discovered gets officially released

+250

CONTENT & COMMUNITY

Post any content (text, video, photo)

+10

Post gets 20+ likes

+50

Post a set review with 200+ words

+75

Post a festival clip that gets 50+ views

+100

Build a public crate with 10+ tracks

+80

Your crate gets 10+ followers

+150

SCENE PARTICIPATION

Attend an event (check-in or clip)

+100

Attend 5 events in one month

+300

Manually submit a fan setlist

+75

EDM PASSPORT

The Passport is the visual record of your life in the scene. Displayed on every profile. Shareable. Becomes a social object fans compare and compete with.

Passport Stamp	How Earned	Displayed As
Event Attended	Check-in, clip upload, or RSVP + mark attended	Event badge on passport grid
DJ Seen Live	Attend an event where that DJ played	DJ avatar added to passport
Venue Visited	Check in at a venue	Venue badge with visit count
City Explored	Attend an event in a new city	City pin on a globe visual
Festival Badge	Attend a named festival	Festival artwork stamp
Early Adopter	Joined before public launch	Permanent gold badge

"Send me your passport" becomes a thing in the community. Users share them on Instagram. Every shared passport is a free ad for Underground.

SPECIAL BADGES

Founder

Joined waitlist before launch. Permanent. Never available again.

Campus Ambassador

Recruited as UM/FSU/UCF/FIU rep. Referral code attached to profile.

First ID

First person to correctly ID a specific track. Permanent on that track's page.

City OG

First 100 users in a city. Permanent city badge on profile.

Tastemaker

Followed 5+ tracks before they hit Heat Score 90+.

Legend

Community nominated. Top 1% of contributors city-wide.

SECTION 13

BUSINESS MODEL & REVENUE

Revenue rule: community adoption unlocks each revenue tier. Do not optimize for money before you have retention. A platform with 500 daily active users and \$0 revenue is more valuable than one with \$2K/month and declining engagement.

Focus order: community → retention → ticketing → subscriptions → marketplace → advertising → data.

01

TICKETING — MONTH 6 (500 WAU)

Venues list events free. Underground takes \$1.50-\$2.50 per ticket (2.5%). Stripe Connect pays venues directly. We never hold funds. Starts as RSVP-only, upgrades to real tickets when retention is proven.

\$36,000/week at scale

20 venues × 3 nights × 300 tickets × \$2

02

PRO SUBSCRIPTIONS — MONTH 4

Fan Pass \$5/mo (advanced radar, no ads, passport export) · DJ Pro \$15/mo (analytics, booking tools) · Venue Pro \$50/mo (event dashboard, promoted). Free must be genuinely useful — Pro adds power, not access.

\$5–\$50/user/month

Start with Fan Pass + DJ Pro only. Add Venue Pro at Month 6.

03

PROMOTED PLACEMENT — MONTH 6

Venues and promoters pay for featured event placement. Feed boost, city page top, Tonight Near Me pin. Self-serve Stripe dashboard. No sales team needed. Only worth buying when the platform has real audience.

\$50–\$500/week per placement

04

BOOKING MARKETPLACE — MONTH 10

Underground takes 5% of confirmed bookings. Only build this after 2,500 users — the marketplace needs volume to work. Free DJs see locked booking requests (unlock with DJ Pro).

5% of confirmed bookings

05

AFFILIATE LINKS — MONTH 8 (1K USERS)

Pioneer DJ gear, Ableton, Native Instruments, Splice, Plugin Boutique. Contextual placement (on DJ profile pages, setlist exports, track pages). Zero friction — these users already buy this stuff.

4–8% commission

06

FESTIVAL & BRAND ADVERTISING — 50K USERS

Ultra, Tomorrowland, ADE, Movement, Pioneer DJ, Roland, Output. Sponsored city pages, feed takeovers, event spotlights. This is a long-term play — do not pitch brands before you have scale.

\$5K–\$50K/deal

07

DATA & INTELLIGENCE REPORTS — FUTURE (10K+ USERS)

Anonymized trend intelligence sold to labels, booking agencies, festivals. "Which unreleased tracks are getting the most ID requests in Miami?" "Which DJs are breaking tracks earliest?" "Which cities have the highest demand for a specific artist?" This becomes extremely valuable once the EDM graph has real scale. No external data can replicate it.

B2B licensing — TBD

REVENUE TIMELINE SUMMARY

Milestone	Revenue Stream Unlocks	Est. Monthly Revenue
Launch (Month 4)	Fan Pass + DJ Pro subscriptions	\$500-\$2K
500 WAU (Month 6)	Full ticketing + Venue Pro + Promoted Placements	\$2K-\$10K
1,000 WAU (Month 8)	Affiliate links	\$5K-\$20K
2,500 users (Month 10)	Booking Marketplace	\$10K-\$50K
10,000 users	Data reports + brand partnerships begin	\$50K+/mo potential
50,000 users	Full brand advertising, festival deals	\$200K+/mo potential

SECTION 15

BUILD ROADMAP — ALL FEATURES, EVERY PHASE

All 47 tasks across every feature are listed here in the order they get built. Web launches first. Mobile follows. Each phase is fully working before the next begins. This aligns with the 24-week plan and post-launch roadmap in Section 15.

HOW TO READ THIS

Phases 1–3 = Weeks 1–16 (pre-launch). Phases 4–5 = Weeks 17–24 (post-launch growth). Phases 6–7 = Months 6–12 (post-traction). Phase 8 = Month 13+ (AI/scale). Everything is here. Nothing is cut.

PHASE 1 — WEEKS 1–8

FOUNDATION + MVP

Web only. Audience running in parallel.

- 01 Project setup — Next.js, TypeScript, Tailwind, ESLint, GitHub, Vercel CI
- 02 Supabase schema — MVP tables (users, profiles, posts, events, track_ids, follows, notifications)
- 03 Auth — email + Google OAuth, role selection (fan / DJ / producer / venue / promoter), protected routes
- 04 User profiles — role-specific (DJ, Producer, Venue, Fan, Promoter)
- 05 Discover directory — DJs, Producers, Venues by city
- 06 Follow system — follows table, notification subscriptions
- 07 Social feed — text, photo, video, event flyer post types, compose, infinite scroll, likes, comments
- 08 Events — create/edit/publish, event detail page, RSVP + external ticket link
- 09 Tonight Near Me — geolocation, Mapbox dark map, nearby events list + map pins
- 10 Track ID requests — upload 30-second clip, community comments, upvote correct ID, mark solved
- 11 Basic setlists — DJ manually builds setlist, tags event, publishes publicly
- 12 Email + push notifications — new follower, track ID answered, event RSVP, new post from followed DJ

PHASE 2 — WEEKS
9–16

PRIVATE LAUNCH → PUBLIC MIAMI LAUNCH

Web. Seed content. Fix and learn. Go
public Week 16.

- 13 Full UX polish — mobile-first pass on every screen, fast loading, smooth posting
- 14 Rate limiting — Upstash Redis on all API routes (auth: 5 req/15min per IP)
- 15 Full RLS audit — test every policy with a second account, every role
- 16 Security headers — next.config.js, input validation, payload size limits
- 17 Sentry — client + server error tracking, source maps, remove all console.log
- 18 Performance audit — Lighthouse 90+ on mobile before public launch
- 19 Content seeding — profiles, events, track IDs seeded before public launch
- 20 Killer feature sprint — Week 14–15: build whatever private launch data says users love
- 21 Public launch — remove invite restriction, push through all channels

PHASE 3 — WEEKS 17–24 —
THE MOAT

AUDIO INTELLIGENCE + MOBILE

These only get built because real users are
already in the app.

- 22 Underground TV — vertical video feed, upload pipeline, Following/For You tabs
- 23 Setlist Intelligence Part 1 — upload pipeline, audio segmentation, ACRCLOUD API
- 24 Setlist Intelligence Part 2 — bulk fingerprinting, fallback chain (ACRCLOUD → Audd → AcoustID), setlist output UI
- 25 Heat Score — nightly Supabase Edge Function, formula, indexed column, Underground Radar page
- 26 Track Pages — every track gets its own page (released + unreleased)
- 27 Audio ID tool — single-track Shazam-style: Audd → ACRCLOUD → AcoustID for /identify endpoint
- 28 Expo + React Native mobile app — onboarding, auth, profiles, feed, events, track IDs ported
- 29 Push notifications mobile — APNs (iOS) + FCM (Android) via Expo Notifications
- 30 App Store + Google Play submission

PHASE 4 — MONTH 6–7

TICKETING + REPUTATION

Unlocks at 500 weekly active users.

- 31 Full Stripe Connect ticketing — venues sell in-app, Checkout, QR code, webhook
- 32 Ticket confirmation email — Resend template, QR attached, event details
- 33 Fan Reputation System — XP, levels (ID Hunter → Scene Legend), badges, city leaderboard
- 34 City Rankings leaderboard — weekly, powered by Heat Score + events + post volume
- 35 Creator analytics dashboard — followers, reach, RSVPs, ticket sales

PHASE 5 — MONTH 8–9

CONTENT DEPTH + DISCOVERY

Unlocks at 1,000 weekly active users.

- 36 Releases page — Beatport RSS + Spotify new releases, Heat Score beside each track
- 37 DJ Crate Sharing — public/private genre-tagged collections, follow curators
- 38 City Scenes pages — /scenes/[city]: local feed, artists, venues, events, releases
- 39 Track Lineage — version tree: Original → Bootleg → Edit → VIP → Official Release
- 40 Where Was This Played — full history view per track, every DJ, every city
- 41 Notify Me When This Drops — email + push when unreleased track hits Beatport/Spotify
- 42 Festival pages — community setlist submission + voting
- 43 Promoted placement dashboard — venues pay to feature events, self-serve, Stripe billing

PHASE 6 — MONTH 10–12

MARKETPLACE + SECOND CITY

Unlocks at 2,500 users + proven retention.

- 44 Booking Marketplace — browse DJs, inquiry form, inbox, 5% booking fee
- 45 Second city launch — NYC or Chicago, same seeding playbook as Miami
- 46 Mix Compatibility Engine — BPM + Camelot Wheel track matching
- 47 Playlist Builder — build from Underground tracks, export to Spotify/Apple Music/Beatport
- 48 Label dashboards — verified label pages, release management, fan analytics

PHASE 7 — MONTH 13+

AI + SCALE FEATURES

Unlocks at 5,000+ users across multiple cities.

- 49 AI Mix Recommendations — setlist transition data → next track suggestions (requires 10K+ uploads)
- 50 Producer Feedback Marketplace — upload unreleased, get structured feedback from DJs + fans
- 51 Sample Recognition — identifies samples, links to original (WhoSampled API partnership)
- 52 Advanced Heat Score V2 — cross-city momentum, DJ prestige weighting, early-adopter bonuses
- 53 Underground Intelligence Reports — weekly automated report for DJs/venues (email + in-app)
- 54 Third city or international — London or Berlin

PHASE 8 — ONGOING

HARDENING (every

Security and quality are not a phase — they run throughout.

phase)

- RLS audit after every schema change — test every policy with every role
- Rate limiting review after every new API route
- Input validation on every new endpoint
- Sentry monitoring — review errors weekly, fix anything with 10+ occurrences
- Performance check — Lighthouse mobile after every major feature ship
- Mobile QA on real devices before every app store update

SECTION 15

24-WEEK PLAN & HOURS

This plan runs two tracks in parallel from Week 1: building the product and building the audience. The app does not launch until there is real content and real people ready. Mobile comes after the web version is proven. The moat features (audio ID, Heat Score) come after you know what users actually want.

TRACK A — ALL 24 WEEKS

BUILD

Writing code, setting up infra, shipping features. Claude Code is your main tool. Budget 2-3 hours every day.

TRACK B — ALL 24 WEEKS

GROW

TikTok, Instagram, DJ outreach, events, UM networking. This never stops. 30-60 min per day minimum.

CRITICAL RULES FOR THIS PLAN

- Do NOT skip the social media work in Weeks 1-8. The audience must exist before launch.
- Do NOT build moat features (audio ID, Heat Score) before MVP is in real users' hands.
- Do NOT launch mobile before web is proven and stable.
- Buffer weeks are real — use them. Do not treat them as free weeks to add features.

WEEK

BUILD (CODE)

GROW (AUDIENCE)

HRS

COST

PHASE 1 — FOUNDATION + AUDIENCE (WEEKS 1–4)

01

Next.js + TypeScript + Tailwind + Supabase project setup. Design system (colors, fonts, components). Folder structure. Apply for Apple Developer account (\$99) on Day 1 — approval takes 1-2 days.

Create Instagram + TikTok. Post Day 1. First content: "Building the EDM app I wish existed." Post 3-5x/day TikTok, 1-2x/day IG from now on.

20 hrs

\$249

02

Supabase schema — MVP tables only (users, profiles, posts, events, track_ids, follows, notifications). RLS policies. Storage buckets. Test every policy with a second account before moving on.

Write a list of 20 Miami DJs to target. Start following and engaging with their content genuinely. Do not DM yet.

20 hrs

\$0

03

Auth (email + Google OAuth), role selection onboarding (fan / DJ / producer / venue / promoter), protected routes, basic landing page. Verify auth works for all role types.

DM first 5 DJs: "Building a Miami EDM platform — would love your feedback, not asking you to join yet." Go to one Miami event this weekend.

18 hrs

\$0

04

User profiles (all roles — bio, links, role badge, avatar). Follow system. Notification subscriptions. Discover/directory page. Profile is the identity — make it feel good.

DM 5 more DJs. Reach out to 2-3 Miami venues or promoters on Instagram. Post first "app teaser" content — no link yet, just the concept.

20 hrs

\$25

PHASE 2 — MVP CORE FEATURES (WEEKS 5–8)

05

Social feed — text, photo, video, event flyer post types. Compose modal. Infinite scroll. Like + comment. This is the core of the app — make it fast and buttery smooth.

Start posting "events this weekend in Miami" content. Screenshot format. Becomes a weekly staple. Engage with every comment on every post from now on.

22 hrs

\$25

06

Events — create/edit/publish event, event detail page, RSVP (no ticketing yet — just RSVP + link out to existing ticket page). Tonight Near Me

— geolocation + Mapbox dark map + nearby events list.

Attend one Miami event. Meet people in person. Your pitch: "I'm building the Miami EDM app — takes 30 seconds to sign up when it launches." Collect Instagram handles.

20 hrs

\$54

07

Track ID requests — upload a 30-second clip, community can comment answers, upvote correct IDs, mark as solved. This is the killer community feature. Make uploading clips dead simple on mobile browser.

Post 5 Track ID clips this week. These are your highest-engagement content. "ID? Heard this in Miami last weekend." Start tracking which posts perform best.

22 hrs

\$25

08

Basic setlists — DJ can manually add tracks to a setlist, tag an event, make it public. Fan can view, comment, follow the DJ. This is the manual version before audio ID exists.

DM remaining DJs from your list of 20. Target: at least 5 DJs committed to being early users. Offer them verified profile + free premium forever as early founders.

18 hrs

\$25

PHASE 3 — PRE-LAUNCH SEEDING (WEEKS 9–12)

09

Polish and harden MVP. Mobile-first UX pass on every screen. Fast loading. Easy posting. Fix anything broken or confusing. Sentry error tracking. Basic rate limiting on all API routes.

Seed the app. Create profiles for 5+ DJs (with their permission). Post events manually. Post 10+ track ID clips into the feed. App cannot feel empty at launch.

18 hrs

\$25

10

Email + push notifications (new follower, event RSVP, track ID answered, new post from followed DJ). Resend for email. These bring users back — they are not optional.

Walk into 3 Miami venues in person. Show them the events feature on your phone. Offer free event listings forever. Goal: 2 venues committed to posting their events on Underground.

20 hrs

\$25

11

BUFFER — catch up on Weeks 9–10 if behind. If on track: add Stripe Connect for venue ticket links (basic integration), improve feed performance, fix any UX issues surfaced by early testers.

Pre-launch check: Do you have 20 DJs? 5 venues? 5 promoters? 3 photographers? 100 committed early users? If not, this week is recruiting, not building.

16 hrs

\$25

12

Final pre-launch hardening. Full RLS audit — test every table as every role. Input validation on every API route. Reject oversized payloads. Security headers. Lighthouse performance audit — must hit 90+ on mobile.

Build hype. Post "launching in Miami next week" content. Give early DJs a sneak preview link. Create a waitlist or sign-up form. Set up a launch-day post series.

18 hrs

\$99

PRIVATE LAUNCH — WEEKS 13–15

13

PRIVATE LAUNCH. Open to 100–300 people: your DJs, venues, UM friends, group chats. Monitor everything. Sentry, Supabase logs, Stripe webhooks. Watch for crashes. Be available to fix issues same day.

Send personal messages to every person you've talked to. "Underground is live — you're one of the first." Post the launch on TikTok and Instagram. No paid ads.

20 hrs

\$99

14

Fix everything broken in Week 13. Not adding features — fixing. Talk to your early users directly. What do they actually use? What do they ignore? What confuses them? Build a simple analytics view (Supabase queries) to see behavior.

Study what posts are performing on TikTok and IG. Double down on the content type that works best. Ask early users to post about Underground — offer a shoutout or feature placement in return.

18 hrs

\$99

15

Build whatever the data says users love most from Week 14. If Track IDs are winning: improve the ID experience, add voting, add solved/unsolved filter. If events are winning: improve Tonight Near Me, add saves, add calendar. Follow the data, not the plan.

Reach out to 2–3 Miami DJs with 20k–100k followers. Offer: verified profile, free premium forever, first access to fans, featured placement. One yes here is worth 1,000 downloads.

20 hrs

\$99

PUBLIC MIAMI LAUNCH — WEEK 16

16

PUBLIC LAUNCH. Remove invite restriction. Push through every channel simultaneously: DJs post it, you post it, UM group chats, Reddit (r/electronicmusic, r/miami), Discord servers, in-person at any events this week.

Launch day content series: post every 2 hours on TikTok. "Underground just went live in Miami." Tag every DJ and venue that's on it. Run a Track ID contest with a prize (tickets, merch, feature).

22 hrs

\$99

PHASE 6 — GROWTH + ADVANCED FEATURES (WEEKS 17–20)

17

Apply for Google Play Developer (\$25). Underground TV — vertical video feed, upload pipeline, Following/For You tabs. Video is your biggest organic reach tool — make upload dead simple. Budget extra time for transcoding complexity.

Push to 500 users. Fraternities, UM clubs, EDM group chats. Every new user should get a personal welcome DM. Track weekly active users — this is the only metric that matters right now.

24 hrs

\$124

18

SETLIST INTELLIGENCE Part 1 — Only build this now because you have real users and know the app is working. Upload pipeline architecture, audio segmentation, ACRCLOUD API integration. Do not ship until a real set upload returns a real setlist.

Post "new feature dropping: upload your set and get the full tracklist automatically." Hype before it launches. Get 3 DJs to agree to be first testers.

24 hrs

\$348

19

SETLIST INTELLIGENCE Part 2 — bulk fingerprinting, fallback chain (ACRCLOUD → Audd → AcoustID), setlist output UI, real-world test with 5 actual DJ sets before shipping. Heat Score formula — nightly Edge Function, Underground Radar page.

Ship Setlist Intelligence publicly. This is your press moment: "Upload your set, get the full tracklist in minutes." DM Mixmag, DJ Mag, Magnetic Magazine with the pitch.

24 hrs

\$199

20

BUFFER — catch up on Weeks 18–19 if behind (audio integration is the hardest part of this whole build). If on track: Fan Reputation System (XP/levels/badges), creator analytics dashboard, promoted placements for venues.

Check retention: are users returning weekly? If WAU is flat or dropping, stop building and talk to users. What's broken? What's missing? Fix that first.

16 hrs

\$199

PHASE 7 — MOBILE APP (WEEKS 21–24)

21

Expo + React Native setup, EAS configuration. Mobile onboarding: splash → role select → city → follow 5 DJs → feed. Port auth, profiles, feed, events, track IDs to mobile. Bottom tab nav: FEED / TONIGHT / RADAR / YOU.

"Underground mobile is coming." Post sneak peeks of the mobile app UI. Build anticipation with your existing user base. Ask: what feature do you most need on mobile?

24 hrs

\$99

22

Push notifications — APNs (iOS) + FCM (Android) via Expo. Mobile QA on real iOS + Android devices. Every screen, every role. Fix all crashes and layout issues. Push notifications are the single biggest retention driver — test every trigger thoroughly.

Build hype for mobile launch. Offer early access to first 100 people who DM the Instagram. Creates urgency + grows your following at the same time.

22 hrs

\$99

23

App Store submission (iOS) + Google Play. Write store listings, screenshots (use real Miami content), preview video. Apply for Apple Developer if not done. Submit early — Apple review takes 1-7 days. Handle any rejection feedback immediately.

Announce app store launch on all channels. "Underground is now on iOS and Android." Tag every DJ, venue, and promoter that's on the platform. Ask them to post it to their audiences.

18 hrs

\$124

24

BUFFER — handle Apple review feedback / resubmission if needed. If approved and live: monitor Sentry, Supabase metrics, Stripe webhooks in real time. Fix any launch-day issues. Begin planning second city expansion (Chicago or NYC).

Month 6 review: Are you at 1,000 users? What feature do they love? What is the WAU retention rate? This data tells you what Underground actually is — and what to build next.

14 hrs

\$199

462

TOTAL HOURS OVER 24 WEEKS

~19 hrs/week · 2-3 hrs/day building + 30-60 min/day growing

~\$2,500

ESTIMATED TOTAL BUILD COST

Biggest variables: ACRCLOUD plan tier + Apple Developer account

HOW THIS PLAN DIFFERS FROM TECH-ONLY PLANS

Old approach

Build everything, then market

Ship moat features in first 12 weeks

Launch globally from day one

Mobile from the start

Paid ads to get first users

Build what's on the roadmap

This plan

Build audience from Day 1, in parallel

Moat features after MVP is in real users' hands

Miami only until retention is proven

Web first, mobile after web is proven

Manual outreach, DJ relationships, in-person

Week 14–15: build whatever users actually use

The most important milestone is not Week 16 launch. It's Week 14 — when you look at the data and find out what people actually use.

Everything before that is building toward that question. Everything after that is answering it.

POST-LAUNCH ROADMAP — MONTHS 6 THROUGH 18

Every feature below is fully designed, schema-ready, and planned. They are not being cut — they are being sequenced. Nothing ships post-launch until the user data from Miami tells you it's the right next move.

THE RULE FOR ALL POST-LAUNCH FEATURES

Each batch below only unlocks when the previous milestone is hit. Do not build Month 8 features if Month 6 metrics aren't met. Growth unlocks complexity.

500 WEEKLY ACTIVE USERS · MIAMI

~Month 5

A Unlocks this batch. Check: are people posting, returning, and following DJs every week?

FULL TICKETING + REPUTATION

Month 6–7

- 01 Full Stripe Connect Ticketing** — venues sell tickets directly in-app, Checkout session, QR code delivery, webhook. RSVP links in MVP become real purchases. This is your first real revenue stream.
- 02 Fan Reputation System** — XP points, levels (ID Hunter → Crate Digger → Underground Expert → Scene Legend), badges, city leaderboard. Earn XP by solving track IDs, posting, attending events, following artists.
- 03 City Rankings Leaderboard** — weekly leaderboard powered by Heat Score + event activity + post volume. Week-over-week changes. Makes Miami feel like a competitive scene.
- 04 Creator Analytics Dashboard** — DJs and venues see followers, reach, event RSVPs, ticket sales. This is the feature that makes DJs recruit other DJs for you.
- 05 Ticket Confirmation Email** — Resend template, QR code attached, event details. Automated on Stripe webhook success.

MILESTONE 1,000 WEEKLY ACTIVE USERS · MIAMI

~Month 7

A Unlocks this batch. Check: are DJs uploading setlists? Are fans solving track IDs? Is the feed active daily?

BATCH 2 CONTENT + DISCOVERY DEPTH

Month 8–9

- 06 **Releases Page** — Beatport RSS + Spotify new releases feed. Released and unreleased tracks in one place. Updated daily. Shows Heat Score beside each release.
- 07 **DJ Crate Sharing** — public/private genre-tagged track collections. Fans can follow curators like they follow DJs. Crates become discovery tools.
- 08 **City Scenes Pages** — /scenes/miami: city-filtered feed, local artists, local venues, upcoming events, local releases. Sets the template for every future city.
- 09 **Track Lineage** — full version tree for every track: Original → Bootleg → Edit → VIP Mix → Festival Edit → Official Release. Artist tagging and community suggestions.
- 10 **Where Was This Played** — full history view per track: every set it appeared in, which DJs played it, what city, what date. Pulls from setlist intelligence data.
- 11 **Notify Me When This Drops** — fan marks an unreleased track. Gets an email + push notification the moment it appears on Beatport or Spotify. Powered by track_notifications + Resend.
- 12 **Festival Pages** — static festival pages upgraded to community setlists. Fans submit tracks from the stage, others vote, finalized setlist gets exported.
- 13 **Promoted Placement Dashboard** — venues and promoters pay to feature their event at the top of the Miami feed or Tonight Near Me. Self-serve, Stripe billing, impression reporting.

MILESTONE 2,500 USERS · RETENTION PROVEN · SECOND CITY DECISION

~Month 9–10

A Unlocks this batch. Check: weekly active rate above 40%? Revenue from tickets? DJs organically sharing the platform?

BATCH 3 MARKETPLACE + SECOND CITY

Month 10–12

- 14 **Booking Marketplace** — browse DJs by fee range, dates available, cities played, audience size. Direct inquiry form → inbox → contract. Underground takes 5% of booking fee.
- 15 **Second City Launch** — apply everything learned from Miami. Same pre-launch seeding playbook: 20 DJs, 5 venues, 5 promoters, 100 early fans before public launch. Most likely NYC or Chicago.
- 16 **Mix Compatibility Engine** — BPM + Camelot Wheel matching between tracks in the database. Suggests harmonic next tracks in a set. Only useful once 1,000+ setlists are uploaded.
- 17 **Playlist Builder** — build a playlist from any combination of tracks in Underground. Export to Spotify, Apple Music, Beatport wishlist, or shareable link.
- 18 **Label Dashboards** — labels get a verified page, can post releases, see Heat Scores for their catalog, post pre-release content, monitor fan reactions.

MILESTONE 5,000+ USERS · MULTI-CITY · REVENUE POSITIVE

~Month 12+

A Unlocks this batch. These features require real scale to be useful — they are not shortcuts.

BATCH 4 AI + ADVANCED INTELLIGENCE

Month 13–18

- 19 AI Mix Recommendations** — uses setlist transition data to recommend what track to play next based on the current track, BPM, key, and the crowd energy signals from the feed. Requires 10,000+ uploaded sets to be accurate.
- 20 Producer Feedback Marketplace** — producers upload unreleased tracks and get structured feedback from DJs, fans, and other producers. DJs can flag tracks as "I'd play this." Creates a discovery pipeline from producer to DJ to crowd.
- 21 Sample Recognition** — identifies samples within a track and links to the original. Requires WhoSampled API partnership or similar. Shows the lineage of influence across electronic music.
- 22 Advanced Heat Score V2** — adds crowd energy signals, cross-city momentum, DJ prestige weighting, and early-adopter bonuses. More nuanced than V1 formula but only meaningful with city-scale data.
- 23 Underground Intelligence Reports** — weekly automated report for DJs and venues: your top tracks this week, what's trending in your city, what your audience is listening to. Email + in-app.
- 24 Third City + International** — London or Berlin. EDM culture is global. Miami and a US second city proves the model domestically. London or Berlin proves it internationally.

FULL FEATURE COUNT

8

MVP features
shipped Week 1–16

4

Advanced features
shipped Week 17–24

12

Post-launch features
Batches 1–3

6

AI/scale features
Batch 4 (Month 13+)

30 total features across all phases. Nothing is cut. Everything has a place. The order is what makes this winnable.

SECTION 16

FULL COST BREAKDOWN

TOTAL TO BUILD & LAUNCH

\$1,834

One-time cost over 18 weeks

ONE-TIME BUILD COSTS

Item	Cost	When	Notes
Domain (ugscene.app)	\$150/yr	Week 1	.fm domains cost more than .com — budget \$150
Apple Developer Program	\$99/yr	Week 5	Required for APNs push notifications and App Store
Google Play Developer	\$25 once	Week 5	One-time fee, never expires
Design tools (Figma)	\$15/mo	Week 1	Optional if using the mockup as reference
ACRCloud bulk access	\$99-\$299/mo	Week 8	Required for Setlist Intelligence — biggest variable cost
Audd.io	\$29/mo	Week 8	Primary audio ID service
Mapbox	Free tier → \$50+	Week 7	50K map loads free/month, then \$0.50/1K

MONTHLY RUNNING COSTS (AT LAUNCH)

Service	Cost/month	What it covers
Vercel Pro	\$20	Web hosting, edge functions, CI/CD
Supabase Pro	\$25	Database, auth, storage, realtime
Expo EAS Production	\$99	Mobile builds, OTA updates, push notification infra
ACRCloud	\$99-\$8,000+	Setlist Intelligence fingerprinting — scales with usage
Audd.io	\$29	Primary audio ID for /identify and TV
Resend	\$20	10 email templates, transactional email
Upstash Redis	\$10	Rate limiting on all API routes
Sentry	\$26	Error tracking, client + server
Mapbox	\$5-50	Tonight Near Me map — scales with users
TOTAL	~\$359/mo	At launch with minimal users

COST MILESTONES

Users	Monthly Cost	Key driver
0-1K	~\$359/mo	Fixed infra costs dominate
1K-5K	~\$500/mo	ACRCloud usage starts climbing
5K-20K	~\$800-1,500/mo	ACRCloud + Supabase storage + CDN
20K-100K	~\$2,000-5,000/mo	ACRCloud bulk + Vercel bandwidth + Supabase compute
100K+	Negotiate	Enterprise deals with ACRCloud, Supabase compute add-ons

ACRCloud is the critical cost variable

Setlist Intelligence (the competitive moat) uses ACRCLOUD's bulk fingerprinting endpoint. If every DJ Pro subscriber uploads one 2-hour set per week: 180 segments × \$0.003/segment = \$0.54/user/month. DJ Pro is \$15/month. The math works at scale. But you must gate Setlist Intelligence to DJ Pro subscribers to control costs — never offer unlimited uploads on the free tier.

SECTION 17

HOW TO GET EVERY API KEY

All services accept individual sign-ups. No business required. Apply for Spotify and ACRCLOUD on Week 1 — they have the longest wait times.

SUPABASE

INSTANT

Free → \$25/month Pro

supabase.com → New Project → Settings → API

1. Create account at supabase.com
2. New Project → choose a region close to your users (US East or EU West)
3. Settings → API → copy SUPABASE_URL and ANON_KEY
4. Settings → API → Service Roles → copy SERVICE_ROLE_KEY (keep secret)
5. Start free, upgrade to Pro (\$25/mo) when you hit limits

STRIPE + STRIPE CONNECT

INSTANT

Free to use · 2.9% + 30¢ per transaction

stripe.com → Developers → API keys

1. Create account at stripe.com (individual, no business needed)
2. Dashboard → Developers → API Keys → copy publishable and secret keys
3. Enable Stripe Connect: Dashboard → Connect → Settings → Enable
4. Create webhook endpoint pointing to /api/webhooks/stripe — listen for checkout.session.completed
5. Copy STRIPE_WEBHOOK_SECRET from webhook endpoint page
6. Create subscription prices for Fan Pass (\$5), DJ Pro (\$15), etc. → copy price IDs

AUDD.IO

INSTANT

\$29/month · 2,000 recognitions included

audd.io → Sign up → API token

1. Sign up at audd.io
2. Dashboard → API Token → copy token
3. Test with a 10-second MP3 clip before integrating
4. Best for DJ/social content — stronger on electronic music than ACRCLOUD

ACRCLOUD

APPLY WEEK 1 · 1-5 DAY WAIT

\$99-\$299/month · Bulk endpoint required

[acrcloud.com](#) → [Console](#) → [New Project](#) → [Recorded Music recognition](#)

1. Create account at [console.acrcloud.com](#)
2. [New Project](#) → [Audio and Video Recognition](#) → [Recorded Music](#)
3. Copy ACCESS_KEY, ACCESS_SECRET, HOST from project settings
4. For Setlist Intelligence, specifically request access to the bulk/batch fingerprinting endpoint — email support@acrcloud.com mentioning bulk audio processing use case
5. Start with the standard plan (\$99/mo) — negotiate once you have volume

SPOTIFY WEB API

APPLY WEEK 1 · 1-3 WEEK WAIT

Free · Extended Quota requires approval

[developer.spotify.com](#) → [Dashboard](#) → [Create App](#)

1. Sign in at [developer.spotify.com](#)
2. Create App — name "Underground", website "ugscene.app", description "Music discovery platform for electronic music"
3. Copy CLIENT_ID and CLIENT_SECRET
4. Add redirect URIs for OAuth: <http://localhost:3000/api/auth/callback/spotify> and <https://ugscene.app/api/auth/callback/spotify>
5. IMPORTANT: immediately apply for Extended Quota mode — Development mode limits you to 25 users. Go to: [Dashboard](#) → [App](#) → [Edit](#) → [Request Extended Access](#). Describe your use case. Takes 1-3 weeks.

MAPBOX

INSTANT

Free tier: 50K loads/month · then \$0.50/1K

[mapbox.com](#) → [Account](#) → [Tokens](#)

1. Create account at [mapbox.com](#)
2. [Account](#) → [Access Tokens](#) → [Create a token](#)
3. Copy the public access token for MAPBOX_ACCESS_TOKEN
4. Restrict the token to your domain in production

RESEND

INSTANT

Free: 100 emails/day · \$20/month for 50K/month

[resend.com](#) → [API Keys](#)

1. Create account at [resend.com](#)
2. Add your domain (ugscene.app) and verify DNS records
3. [API Keys](#) → [Create API Key](#) → copy RESEND_API_KEY
4. Set RESEND_FROM_EMAIL=noreply@ugscene.app

UPSTASH REDIS

INSTANT

Free: 10K commands/day · \$10/month for more

[upstash.com](#) → [Create Database](#) → [REST API](#)

1. Create account at [upstash.com](#)
2. [Create Database](#) → [REST API tab](#) → copy UPSTASH_REDIS_REST_URL and TOKEN
3. Use @upstash/ratelimit with sliding window algorithm

SENTRY

INSTANT

Free: 5K errors/month · \$26/month for more
sentry.io → [New Project](#) → [Next.js](#)

1. Create account at sentry.io
2. New Project → Next.js → follow the wizard (it installs @sentry/nextjs automatically)
3. Copy DSN from project settings → NEXT_PUBLIC_SENTRY_DSN and SENTRY_DSN

APPLE DEVELOPER + APNs

APPLY WEEK 4 · 1–2 DAY WAIT

\$99/year
developer.apple.com → [Enroll](#) → [Individual](#)

1. Go to developer.apple.com/enroll → Individual (not Organization)
2. Pay \$99/year — requires Apple ID, credit card, 2FA enabled
3. After approval: Certificates → Keys → Create a new key → APNs enabled → download .p8 file
4. Expo EAS reads APNs keys automatically during build — add to eas.json

ACOUSTID

INSTANT

Free · Open source community database
acoustid.org → [Register](#) → [API key](#)

1. Register at acoustid.org
2. My account → API Key → copy key
3. Use as free fallback after Audd and ACRCLOUD fail

WEEK 1 API PRIORITY LIST

Apply for these immediately on Day 1 because they have wait times:

1. **Spotify Extended Quota** — apply the same day you create the app (1–3 week wait)
2. **ACRCLOUD bulk endpoint** — email support about Setlist Intelligence use case (1–5 days)
3. **Apple Developer Program** — enroll as individual (1–2 days, sometimes instant)

Everything else (Supabase, Stripe, Resend, Upstash, Mapbox, Audd, AcoustID) is instant — get keys in minutes.

Create `.env.local` in your project root. Never commit this file. Add it to `.gitignore` immediately.

```

SECTION 20

SECURITY REQUIREMENTS

These apply to every build. Non-negotiable. Apply all four to every feature.

ROW LEVEL SECURITY (RLS)

Table	Policy
users	select/update own row only

posts	select public; insert own only
events	select all published; insert/update by organizer or admin
tickets	select own only; insert via service role only
setlist_uploads	select/update own only
track_plays	select all (public data); insert via service role
booking_requests	select where from_user or to_user = auth.uid()
promotions	select/update own only
subscriptions	select own only; update via service role only
notifications	select/update own only

RATE LIMITING

Endpoint	Limit
/api/identify	3/day free users, unlimited Fan Pass+; max 10/hour any user
/api/setlist/upload	5/day free, unlimited DJ Pro+
/api/auth/*	5 attempts per 15 minutes per IP
All routes	30 requests/min per authenticated user

REQUIRED SECURITY HEADERS

```
// next.config.js
const securityHeaders = [
  { key: 'X-Frame-Options', value: 'DENY' },
  { key: 'X-Content-Type-Options', value: 'nosniff' },
  { key: 'Referrer-Policy', value: 'strict-origin-when-cross-origin' },
  { key: 'Content-Security-Policy', value: "default-src 'self'..." },
]
```

NON-NEGOTIABLE SECURITY CHECKLIST

- ✓ Every API route has a Zod schema — reject malformed input before touching the DB
- ✓ File uploads: MIME whitelist + max size enforced server-side (not just client-side)
- ✓ Stripe webhook signature verification on every webhook event
- ✓ JWT validation on all protected routes (use Supabase SSR middleware)
- ✓ No sensitive data in API responses (no stripe_customer_id, no service role key)
- ✓ Location data: never store without user consent, GDPR-compliant
- ✓ .env.local in .gitignore — never commit real credentials

LAUNCH PLAN

Win one city. Win one community. Win one habit. Then expand.

Culture first. Software second.

THE ONE QUESTION THAT DETERMINES EVERYTHING

"Can I build a 10,000-person EDM audience before the app is ready?"

If the answer is yes, your chances of success increase dramatically. Apps rarely blow up because of code. They blow up because the right community already exists when the product arrives.

Spend the first month trying to answer this question with action, not planning.

WAITLIST LEADERBOARD (PRE-LAUNCH)

Before the app launches, create a public waitlist with a points system. This builds the audience, generates social proof, and identifies your most committed early users — before you've written a line of code.

EARN POINTS BY

JOINING

- Join the waitlist — **+100 pts**
- Refer a friend who signs up — **+200 pts each**
- Follow Underground Instagram — **+50 pts**
- Follow Underground TikTok — **+50 pts**
- Refer a DJ who signs up — **+500 pts**

TOP USERS GET

REWARDS

- Permanent **Founder badge** on profile
- First access when app launches
- Free premium for life (top 100)
- Campus Ambassador role
- Exclusive merch drop (top 50)

The leaderboard is public. People share their rank. People compete to move up. Every share is organic reach. Build this on a simple landing page (Typedream, Framer, or basic Next.js) before the app exists.

CAMPUS AMBASSADOR PROGRAM

University campuses are the fastest growth channel for an app targeting 18–25 year-old EDM fans. You're already at UM — use it.

Recruit 5 students from each of these schools:

UM

University of Miami

FSU

Florida State

UCF

University of Central Florida

FIU

Florida International

EACH CAMPUS AMBASSADOR GETS

- Personal referral code (track every signup they drive)
- Permanent Founder role + Campus Ambassador badge on their profile
- Free premium for life
- Exclusive Underground merch when it drops
- First access to event partnerships at their university

20 ambassadors across 4 schools = 20 people whose personal brand is tied to Underground's success. This is probably the fastest growth channel available to you.

DO NOT BUILD EVERYTHING AT ONCE

BUILD NOW — V1

MVP FEATURES

- Social feed
- DJ and fan profiles
- Events near me
- Track ID requests
- Basic setlist uploads

SAVE FOR LATER

FUTURE FEATURES

- Marketplace
- AI recommendations
- Advanced Heat Score
- Full ticketing
- Booking tools
- Producer feedback marketplace

Launch fast. Test fast. See what people actually use. The goal is not to ship every feature — the goal is to find one habit people repeat.

LAUNCH CITY: MIAMI

The first goal is not "become the EDM app." The first goal is: become the app Miami EDM fans check before going out.

WHY MIAMI

- School is there — you can meet people in person
- EDM culture is strong — clubs, promoters, DJs, events
- University of Miami student base already goes out every weekend

BUILD THE AUDIENCE BEFORE THE APP

Create Instagram and TikTok before launch. The page should feel like an EDM media page, not a startup page.

INSTAGRAM

1-3 posts/day

BIO

UNDERGROUND

Everything electronic in one place.

- 🎧 Unreleased IDs
- 📍 Events & raves
- 🎵 Tracks before they blow up
- 👤 DJs • Producers • Fans

Miami → Worldwide

Launching soon.

TIKTOK

3-5 posts/day

BIO

Everything electronic in one place.

🎧 IDs

📅 Events

🎧 Underground tracks

Launching soon.

CONTENT TYPES

Unreleased track clips

ID? 🎧 – Heard this in Miami last weekend. – Released or unreleased? – Track ID below 📄

Festival clips

This drop nearly started a riot. – Would you have stayed for the full set? – 🍻 or 🗑️?

Event posts

MIAMI THIS WEEKEND – Best events happening in the city. – Which one are you going to?

Track discovery

If you know this track, you're deep in the scene. – Artist: – Track: – Rating out of 10?

App teaser

Imagine one app where you could: find tonight's events • track unreleased IDs • follow DJs • discover tracks before they blow up. We're building it.

CONTENT RATIO

For every 10 posts:

7

Normal EDM content

2

Community discussion

1

Mention the app

Do not spam "download the app." Build trust first.

PRE-LAUNCH RECRUITMENT TARGETS

The app cannot feel empty when people open it. Content must already exist.

20

DJs

5

Venues

5

Promoters

3

Photographers / Video

100

Early Fans

DJ OUTREACH — HOW TO DM

Start with 5–10 smaller DJs. Do not DM 500 people.

"Yo, I'm building a platform specifically for EDM artists and fans in Miami. It helps DJs post shows, bui

This sounds better than asking them to join immediately. Feedback first, adoption second.

GET ONE RECOGNIZABLE ARTIST

You do not need a superstar. A DJ with 20k–100k followers is enough.

→ Verified profile

→ Free premium forever

→ Featured placement

→ Early founder status

→ First access to fans

One respected DJ using Underground is more valuable than random ads.

EXCLUSIVITY — REASONS TO DOWNLOAD

People do not download apps because they are cool. They download because they get access.

- Tickets available on Underground first
- Exclusive DJ preview drops
- Private event announcements
- Track ID contests
- Unreleased clips posted only on Underground
- Guest list entry through Underground
- DJ AMA only on Underground

VENUE & PROMOTER PITCH

"Underground can help you reach people who actually care about EDM in Miami. You can post your events, bu

For early venues, keep it free. Make adoption the first priority. Money comes after retention.

IN-PERSON STRATEGY

Every weekend, go to events. Meet:

- Local DJs and promoters
- Photographers and videographers
- Venue owners
- Students who go to shows
- People who run EDM pages

Goal: become known as the person building the EDM app. Do not start by selling. Start by asking for feedback.

USE UM AS AN ADVANTAGE

Start with University of Miami students who already go out. Promote as:

"The easiest way to find EDM events in Miami and discover tracks people are playing."

Get friends to download, post track IDs, follow DJs, RSVP to events, and share with group chats.

GETTING THE FIRST 1,000 USERS

Do not run ads. Get users manually from:

UM Students

Fraternities

EDM Group Chats

Local Shows

DJs Posting It

TikTok / Instagram

Reddit / Discord

Promoters

Events in Person

Early growth is supposed to be hands-on. Manually ask people to try it.

FIND THE KILLER FEATURE

After 100–500 users, study what people actually do.

Possible winning features:

→ Track ID requests — if true, make Underground the best track ID community

→ Events near me — if true, make Underground the best Miami EDM event app

→ DJ profiles — if true, make Underground the best place to follow DJs

Do not assume the whole idea is correct. Let users show what they care about. Then double down.

BUILD IN PUBLIC

→ "I'm building the EDM app I wish existed"

→ "Day 1 of building Underground"

→ "We just got our first Miami DJ"

→ "This is what the app looks like"

→ "Would you use this?"

→ "What feature should we build next?"

→ "We're launching in Miami first"

People like following the story.

WHAT TO TRACK (NOT DOWNLOADS)

WAU Weekly active users

POST How many people post

RTN How many users return

EVT How many events get clicks

IDs Track IDs answered

INV How many invite friends

The most important question: Are people coming back every week?

LAUNCH SEQUENCE

MONTH 1 BUILD THE AUDIENCE

- 01 Create TikTok and Instagram — start posting daily
- 02 Begin talking to DJs and promoters in Miami
- 03 Learn the tools needed to build the MVP
- 04 Go to at least 2 events and meet people

MONTH 2 BUILD THE MVP

- 01 Build MVP (feed, profiles, events, track IDs, setlists)
- 02 Keep posting content — do not go quiet
- 03 Get feedback from 10–20 DJs
- 04 Start collecting early users — hit 100 signups

MONTH 3 PRIVATE LAUNCH

- 01 Let 100-300 people use it
- 02 Fix what is broken
- 03 Watch what people actually use
- 04 Identify the killer feature

MONTH 4 PUBLIC MIAMI LAUNCH

- 01 Push through DJs, students, promoters, Instagram, TikTok, events
- 02 Get one recognizable Miami DJ to post about it
- 03 Run a track ID contest or exclusive event drop

MONTHS 5-6 GROW TO 1,000 USERS

- 01 Improve the strongest feature relentlessly
- 02 Create exclusive drops and event partnerships
- 03 Do not touch paid ads yet

MONTHS 6-12 5,000 → 10,000 USERS

- 01 Add stronger features based on what users love
- 02 Begin thinking about second city expansion
- 03 Only use paid ads once retention data is proven

ACQUISITION CHANNELS

Direct DJ Outreach — Start with 5-10 smaller local DJs. Personalized message. Offer verified profile and free premium forever for early founders.

Venue Walk-Ins — Don't email venues. Go in person. Show the event feature on your phone. Free to list. 3-5 venues posting exclusively = credibility story.

Tonight Near Me — "What's happening tonight?" is a search people do every Friday. Organic acquisition with zero ad spend.

Track ID Content — "Do you know this track?" clips circulate in EDM TikTok. Every clip links back to

Underground. One viral clip = thousands of downloads.

Reddit — r/DJs, r/electronicmusic, r/housemusic, r/techno. Contribute genuinely for 2–3 months first. Then a transparent launch post.

Music Press — Magnetic Magazine, Mixmag, DJ Mag. Angle: "The social network electronic music has been missing." Wait until you have named venues and DJs to reference.

THE BIGGEST DANGERS

Danger 1

Building too much before proving people want it.

Danger 2

Launching with no content. An empty feed is worse than no app.

Danger 3

Acting like a tech company instead of a scene and community brand. Underground should feel like culture first, software second.

WEEKLY CHECK-IN

→ Did we get more DJs?

→ Did we get more content?

→ Did more users return?

→ Did more people talk about Underground?

→ Did we become more important to the Miami EDM scene?

If yes → keep going. If no → simplify and fix the core experience.

SECTION 22

COMPETITIVE POSITION

Feature	Underground	Instagram	SoundCloud	RA	Bandsintown	TikTok
Social scene for EDM	✓ Only	✗	✗	✗	✗	✗
Setlist Intelligence	✓ Only	✗	✗	✗	✗	✗

SECTION 22

BUSINESS VIABILITY ASSESSMENT

35–50%

PROBABILITY OF MEANINGFUL TRACTION

Honest assessment

This is a realistic but hard product. The moat is real. The pain is real. The community is real. The hard part is the cold start — not the code.

WHAT MAKES THIS REAL

- Setlist Intelligence does not exist anywhere else
- The pain is real — 45 min in YouTube comments asking "what is this track?"
- Electronic music fans are obsessive, global, and underserved
- If the builder knows the scene, the cultural authenticity will show

WHAT MAKES THIS HARD

- Empty feed on day one is fatal — 20 DJs must be signed before launch
- Two-sided marketplace × 6 roles = extremely complex cold start
- ACRCLOUD cost at scale can kill margins if not gated to DJ Pro
- RA has 20 years of inertia. Getting venues off Eventbrite is hard.

THE MAKE-OR-BREAK QUESTION

Do you personally know 20 DJs and 5 venues in one city who will post before launch?

If yes — this has a real shot. If no — that's the first problem to solve, not code.

SECTION 23

CURRENT STATUS

✓ COMPLETED — PHASE 1 SCAFFOLD

- ✓ 52-page product spec (v4.0)
- ✓ Design system defined + implemented
- ✓ Mockups approved (5 screens)
- ✓ 22-table database schema — 6 migrations written
- ✓ Tech stack decided + installed
- ✓ All 26 pages/routes mapped
- ✓ Next.js 14 project scaffolded (underground/)
- ✓ TypeScript types for all 22 entities
- ✓ 8 live pages: landing, feed, tonight, TV, radar, login, signup, pricing
- ✓ Bottom nav: FEED/TONIGHT/TV/RADAR/YOU (locked)
- ✓ Rate-limited API routes: posts, events, tonight, identify, stripe webhook
- ✓ Heat Score SQL formula + nightly update function
- ✓ Setlist Intelligence UI page
- ✓ RLS policies on all 22 tables

- ✓ Business model finalized
- ✓ Domain chosen: ugscene.app

o NEXT — CONNECT REAL SERVICES

- o Register ugscene.app on Namecheap
- o Create Supabase project + run migrations
- o Wire real env vars (Supabase, Stripe, Upstash)
- o Auth server actions (login/signup forms wired up)
- o Real event data + user profiles
- o Setlist Intelligence API pipeline (Audd.io → ACRCLOUD)
- o Stripe Connect + ticketing flow
- o Mobile app (React Native + Expo)
- o Upload audio/video to Supabase Storage
- o Mapbox map for Tonight Near Me
- o Everything else (Phases 2–7)

COLD START STRATEGY — MOST IMPORTANT DECISION

DO NOT launch the full social platform first.

The correct sequence:

1. Launch **Setlist Intelligence ONLY** — let DJs upload sets and get tracklists
2. Get 20 DJs uploading → Heat Score has real data
3. Add **Underground Radar** — DJ set data feeds directly into it
4. Users follow tracks on Radar → they create accounts → social layer begins naturally
5. Add **social feed** — now it has real content (DJs' sets, tracks, events)
6. Add **Tonight Near Me** — sign 5 venues. Friday night opens the app.
7. Full platform — everything connects once each piece has real users

SECTION 24

FIRST CLAUDE CODE PROMPT

Copy this exactly into your first Claude Code session. This starts Phase 1, Task 1.

I'm building Underground — a social network for electronic music.
Everything electronic in one place. ugscene.app

Start Phase 1, Task 1: Set up the Next.js 14 App Router project.

Requirements:

- TypeScript strict mode throughout
- Tailwind CSS with custom CSS variables for the Underground color palette:
Background #080808, Surface #111111, Accent Yellow #E8FF47,
Pink #FF3366, Blue #00D4FF, Orange #FF9500, Purple #9B59B6,
Text Primary #FFFFFF, Text Secondary #888888, Border #222222
- Google Fonts: Bebas Neue (headings), DM Mono (labels/tags), DM Sans (body)
- ESLint configured
- src/ directory structure

Install these packages:

```
@supabase/supabase-js @supabase/ssr stripe @stripe/stripe-js
@upstash/redis @upstash/ratelimit resend zod @sentry/nextjs
lucide-react framer-motion mapbox-gl react-map-gl
@tanstack/react-query date-fns
```

Create the full folder structure:

```
/app (with all 26 route files as empty page.tsx stubs)
/components/ui, /components/features/*, /components/layout
/lib/supabase (client.ts server.ts admin.ts)
/lib/audio (auid.ts acrcloud.ts acoustid.ts pipeline.ts setlist.ts)
/lib/stripe (index.ts connect.ts webhooks.ts tickets.ts)
/lib/redis (index.ts rateLimit.ts)
/lib/resend (index.ts templates/)
/lib/location (geolocation.ts nearby-events.ts)
/lib/platforms (spotify.ts beatport.ts soundcloud.ts)
/types (database.ts api.ts audio.ts events.ts setlist.ts location.ts)
/supabase/migrations (9 empty SQL files: 001 through 009)
/emails (10 template stubs)
```

After project setup, proceed to Task 2:

Create all 22 Supabase database tables with these exact columns (I'll paste the full schema). Include RLS policies on every table. Include storage buckets: audio-clips, dj-sets, videos, images. Include indexes on: heat_score, city, genres, location lat/lng, is_released, status columns.

PHASE 1 CHECKLIST

- 01 Next.js 14 project, TypeScript strict, Tailwind, design system, color palette, fonts, folder structure
- 02 Supabase — all 22 tables, RLS policies, storage buckets (audio-clips/dj-sets/videos/images), indexes, 9 migrations
- 03 Auth — email + Google OAuth, role selection on signup, protected routes, Supabase SSR middleware
- 04 Landing page — animated waveform hero, 6-role value props, featured events section, city scenes preview, Radar preview
- 05 Mobile (React Native + Expo) — splash, role selection, city selection, follow 5 artists gate, live feed
- 06 User profiles — role-specific layout for all 6 roles (Fan/DJ/Producer/Venue/Promoter/Label)
- 07 Discover directory — DJs/Producers/Venues/Labels with search + genre + city filters
- 08 Follow system — follows table, following_type (user/scene/genre/track/crate), notification subscriptions
- 09 Push notifications — Expo Notifications, APNs (Apple) + FCM (Android), notification templates

LONG-TERM VISION (12-24 MONTHS)

Underground becomes the operating system for electronic music.

One account. One feed. The scene, the music, the events, the culture — all connected.

Currently uses	Underground replaces it with
Instagram	Social feed with role-specific content
TikTok	Underground TV (EDM-only vertical video)
SoundCloud	Set uploads with Setlist Intelligence
Resident Advisor	Events, festivals, city scenes
Eventbrite	Built-in ticketing with Stripe Connect
Bandsintown	DJ profiles with upcoming shows + Tonight Near Me
1001Tracklists	Setlist Intelligence (automated, not manual)
Discord	City scene feeds + community ID solving
Beatport	Releases page + Heat Score + Underground Radar

FUTURE FEATURES (12-24 MONTH ROADMAP)

- Direct messaging between users
- Livestreaming from events and studios
- Virtual festival experiences
- Artist fan clubs with exclusive content
- EDM marketplace (sample packs, Ableton templates, plugins)
- DJ gear affiliate store (Pioneer DJ, Native Instruments)
- Label deal pipeline — connecting producers with labels via Heat Score data
- Touring data for booking agencies
- AI Mix Recommendations (after 10K+ sets uploaded)
- Underground Radio — curated live radio streams by city/genre

REAL APP — BUILT & LIVE

These are actual screenshots of the running Next.js app — not mockups. Captured at 390×844px (iPhone 14). App is running at localhost:3000, domain will be ugscene.app.

LANDING PAGE

Animated waveform hero, live ticker, all 5 pillar cards, featured events with ticket velocity bars, Radar preview, 6-role cards, 13 city links, full CTA.
